

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

[Village of Ney, Ohio Water System] Failed to Develop, Make Publicly Accessible, and Report an Initial Service Line Inventory

Our water system recently violated a drinking water requirement. As our customers, you have a right to know what happened, what you should do, and what we did (are doing) to correct this situation.

We were required to develop and make publicly available an initial inventory of service lines connected to our distribution system by October 16, 2024. Our system failed to submit this initial inventory of service lines to the Ohio Environmental Protection Agency by October 16, 2024. The inventory must identify the service line materials as lead galvanized requiring replacement (GRR)¹, lead-status unknown/unknown, or non-lead. Identifying and ultimately removing lead and GRR service lines is an important way to protect public health.

**Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems. **

What should I do?

Listed below are some steps you can take to reduce your exposure to lead:

- **Learn what your service line material is.** Contact us at neyohiomayor@gamil.com or a licensed plumber to determine if the pipe that connects your home to the water main (called a service line) is made from lead, galvanized, or other materials. Protect Your Tap: A quick check for lead is the EPA's online step by step guide to learn how to find lead pipes in your home (www.epa.gov/pyt).
- **Learn about construction in your neighborhood.** Unless your service line is not made of lead or galvanized you should be aware of any nearby construction or maintenance work that could disturb the line. Ground tremors from construction may suddenly cause more lead to be released from lead or galvanized service lines in the area.
- **Use your filter properly.** Using a filter can reduce lead in drinking water. If you use a filter, make sure you use a filter certified to remove lead. Read the directions to learn how to properly install and use your cartridge and when to replace it. Using the cartridge after it has expired can make it less effective at removing lead. Do not run hot water through the filter.
- **Clean your aerator.** Regularly remove and clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.
- **Use cold water.** Use only cold water for drinking, cooking, and making baby formula. Remember, boiling water does not remove lead from water.
- **Run your water.** The more time water has been sitting in pipes, the more lead it may contain. Before drinking, flush your home's pipes by running the tap, taking a shower, doing laundry, or doing a load of dishes. The amount of time to run the water will depend on whether your home has a lead service line or not, and the length of the lead service line. Residents should contact their water utility for recommendations about flushing times in their community.

¹ A galvanized requiring replacement service line is a galvanized service line that is or was potentially downstream of a lead service line.

- **Have your water tested.** Contact your water utility to have your water tested and to learn more about the lead levels in your drinking water.

To ensure your water safety, 10 different locations are tested annually. All locations are tested under the EPA standards. The Village of Ney tests daily to ensure chlorine levels are maintained: Since the Village is completely non-lead, material notices won't need to be sent anymore. No alternative sources of water, such as bottled water, are required as a result of this notice.

What does this mean?

Service line inventories are the foundation from which water systems take action to address a significant source of lead in drinking water. Establishing an inventory of service line materials and identifying the location of lead and GRR service lines is a key step in getting them replaced and protecting public health. Typically, lead enters water supplies by leaching from lead pipes, brass faucets, plumbing with leaded solder, and other plumbing components containing lead. In homes with lead pipes that connect the home to the water main, also known as lead services lines, these pipes are typically the most significant source of lead in the water. Lead pipes are more likely to be found in older cities and homes built before 1986. Service lines made of galvanized iron or steel that are (or were previously) downstream of lead service lines are classified as galvanized requiring replacement (GRR) because galvanized service lines that are or ever were downstream from an LSL can adsorb lead and contribute to lead in drinking water. Identifying and ultimately removing lead and GRR service lines is an important way to protect public health.

What is being done?

No action needs to be taken since the water standards have always been met. The violation occurred because of incorrect reporting.

For more information on reducing lead exposure around your home/building and the health effects of lead, visit EPA's Web site at <http://www.epa.gov/lead> or contact your health care provider.

For more information, please contact Tom Vance] at 419-551-2355 or neyohiomayor@gmail.com..

**Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail. **

This notice is being sent to you by **The Village of Ney**. PWSID: OH2000512

Date distributed: **8/3/26**.

Failure to Certify Notification to Persons Served by Known or Potential Service Line Containing Lead– Template 3b

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Reporting Requirement(s) Not Met for Village of Ney Water System

In June 2024 and 2025 the Village of Ney submitted the line inventory late, therefore The Village of Ney was in violation with the EPA. A public notice was posted June 13, 2025. The notice did not satisfy the violation. That is why you have received this report.

Our system failed to demonstrate to the State that it delivered annual notifications and information to affected consumers with lead, galvanized requiring replacement, or lead status unknown service lines as required by July 1, 2025. Although the failure to comply with the reporting requirement does not create a risk to public health, we are required to inform you of this violation and provide additional information including what we did to correct the situation.

It is important for consumers to know if the water they are receiving has been delivered through a lead, galvanized requiring replacement (GRR), or lead status unknown service line so they can make decisions on whether and what actions to take to reduce their exposure to lead in drinking water.

What should I do?

There is nothing you need to do at this time. You do not need to boil your water or take other actions. Remember, boiling water does not remove lead from water.

For more information on reducing lead exposure around your home/building and the health effects of lead, visit the EPA's websites at

<https://www.epa.gov/ground-water-and-drinking-water/basic-information-about-lead-drinking-water> and <http://www.epa.gov/lead>.

What is being done?

While we did not certify and notify the State as quickly as we should have, we provided the required notifications to persons served, as well as the missing information to the State on June 13, 2025. We are no longer in violation. The Village is completely non-lead. The material notices will not be sent anymore.

For more information, please contact Tom Vance at 419-551-2355 or neyohiomayor@gmail.com.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses).
